

KLINGER Graphite Laminate - General information

Inserts

Various products can be produced with more than 1 insert.
For more details, please contact us.

Material handling

The performance and service life of KLINGER graphite laminates depend in large measure on proper storage and fitting, factors beyond our control. We can, however, vouch for the excellent quality of our products. Graphite sticking to flange faces will require a cleaning operation before remaking the joint. Please, check also our installation instructions.

Anti stick coating

Graphite laminates can be coated with an anti stick surface. The KLINGER anti stick gasket (AS) does not leave any deposits on the flange faces, after performing all through the graphite pressure and temperature range.

Special products

For products with special inserts or special dimensions, please contact us.
