Dimensions in mm

\* Indicated weights are understood without weight load and refer to the standard design.

Standard valve setting 7-30 mbar -different settings against additional price-

**Construction length C can be adapted to customers wish to local situation.**

Design subject to change

performance curves: F 0.31 N

### Standard design

housing : steel, stainless steel mat. no. 1.4571  
 valve seat and spindle : stainless steel mat. no. 1.4571  
 valve sealing : NBR, Viton, PTFE  
 gasket : HD 3822, PTFE  
 flange connection : DIN EN 1092-1 form A,  
 ANSI 150 lbs. RF

### Application

as inline armature with venting and breather valve function for vessels.  
 Preferably used for installation in pipes.

# Tank Venting Valve KITO® VD/TG F 31 N

Flow capacity  $V$  based on air of a density  $\rho = 1.29 \text{ kg/m}^3$  at  $T = 273 \text{ K}$  and atmospheric pressure  $p = 1.013 \text{ mbar}$ . For other gases the flow can be approximately calculated by

$$\dot{V} = \dot{V}_b \cdot \sqrt{\frac{\rho_b}{1.29}} \quad \text{or} \quad \dot{V}_b = \dot{V} \cdot \sqrt{\frac{1.29}{\rho_b}}$$

Air flow capacity at 40% above valve setting (see DIN 4119). If different accumulations are required see page A 32 for correcting factor.

Curves indicated by  $\text{---}\text{---}\text{---}$  require special weight loads.
