Standard design

variant I:
housing : cast steel 1.0619
gasket : HD 3822
KITO® casing : steel
KITO® grid : stainless steel mat. no. 1.4310
bolts/nuts : galvanized steel

variant II:
housing : cast steel 1.0619
gasket : PTFE
KITO® casing : stainless steel mat. no. 1.4571, 1.4581
KITO® grid : stainless steel mat. no. 1.4571
bolts/nuts : galvanized steel

variant III:
housing : stainless cast steel 1.4408
gasket : PTFE
KITO® casing : stainless steel mat. no. 1.4571, 1.4581
KITO® grid : stainless steel mat. no. 1.4571
bolts/nuts : ss

KITO® flame arrester
element : completely interchangeable
temperature sensor : PT 100 (option), connection 3/8"
flange connection : DIN EN 1092-1 Form B1
ANSI 150 lbs. RF

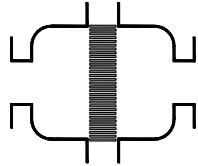

Application

For installation into pipes to the protection of vessels and components against deflagration of flammable liquids and gases. Approved for all substances of explosion group IIA1 (old : I) with a maximum experimental safe gap (MESG) ≥ 1.14 mm. Bi-directionally working in pipes, whereby an operating pressure of 1.2 bar abs. and an operating temperature of 60°C must not be exceeded.

The distance between a potential ignition source and the flame arrester must not exceed 50 times the inner pipe diameter.

An installation into horizontal and vertical pipes is permissible. To detect a thermal load on the KITO® flame arrester element in operation, a thermocouple can be implemented as an option into the flame arrester body.

Proof against "stabilized burning" and withstand this up to a max. burn time BT = 1.0 min.

H 31 N

The flow capacity V refers to a density of air with $\rho = 1.29 \text{ kg/m}^3$ at $T = 273 \text{ K}$ and a pressure of $p = 1.013 \text{ mbar}$

The flow capacity for gases with different densities can be calculated sufficiently accurate by the following approximation equation:

$$\dot{V} = \dot{V}_b \cdot \sqrt{\frac{\rho_b}{1.29}} \quad \text{or} \quad \dot{V}_b = \dot{V} \cdot \sqrt{\frac{1.29}{\rho_b}}$$
